# YAMAHA

Yamaha, established in 1887, is a multinational corporation and conglomerate based in Japan. They offer a wide range of products and services, predominately musical instruments, motorcycles, power sports equipment, and electronics. The Sound Network Division was put in place 15 years ago and has experienced tremendous success with their router and karaoke systems.

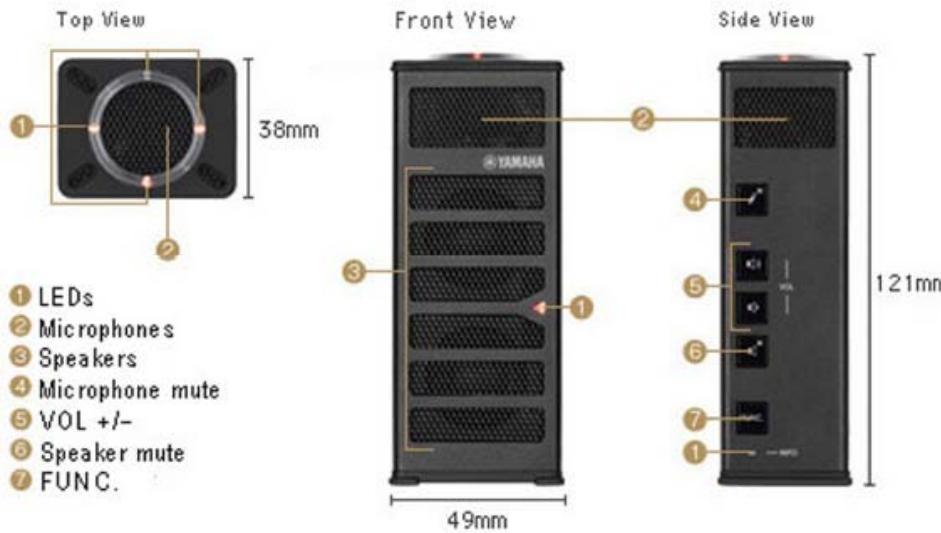

In 2007, the router network technology and audio technology was combined to create Yamaha's first conferencing systems, the ProjectPhone line. Soon after development, Yamaha decided to concentrate the product portfolio on web conferencing technology. Today, the ProjectPhone product line has become the de facto standard for web conferencing in Japan and they are now expanding these high quality systems to the rest of the world.
